

# ProPocket Elite HVAC Bag Filters

## FEATURES

- MERV 10, 11, 13 & 15 efficiencies
- Sealed, span stitch pocket construction
- Extended surface area equates to increased energy savings
- Media backing provides durability for rigorous applications
- Gasketing available

## PROPOCKET ELITE CONSTRUCTION & APPLICATIONS

Stitch pocket construction

The ProPocket Elite fiberglass bag filters are extended surface filters that offer trusted performance and are available in four efficiency options: MERV 10, MERV 11, MERV 13 and MERV 15.

ProPocket Elite HVAC bag filters are manufactured to the highest quality standards using the unique span stitch construction of the pockets. This span stitch is sealed with an adhesive sealant to prevent any leakage. MANN+HUMMEL's header design is double the weight and 2-3x the strength of competitors headers. We manufacture the header and hoop from flat steel with our own equipment.

The micro-fiberglass media is backed by a scrim layer to offer protection and durability. The ProPocket Elite filters are offered in a variety of standard size and pocket combinations with special size filters available. Upon request, the ProPocket Elite bag filters are also available with variety of header options – a nominal 1 inch galvanized header is standard.

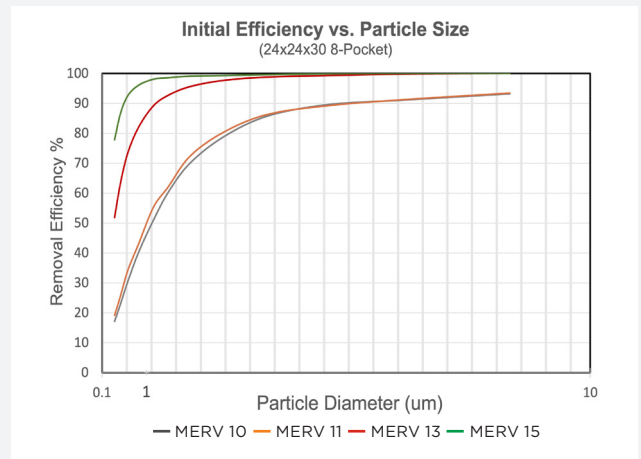

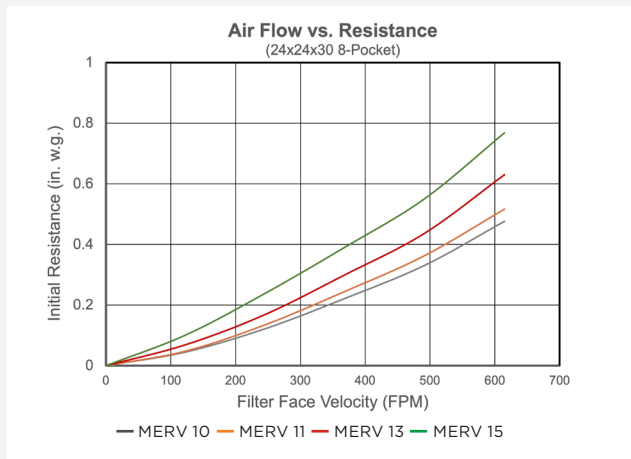

Standard galvanized header
