Leadership in Filtration
OurAir SQ 2500

Virus-free, safer air

For your café, bar or restaurant

Individually-tested H14 HEPA filters¹ capture more than **99.995%** of viruses, bacteria & other micro-organisms

High performance air flow rate for efficient air exchange

Low power consumption through optimized system and filter media design

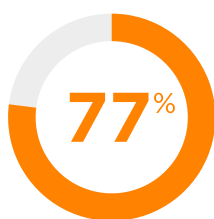

Quiet operation, and discreet, neutral design for unobtrusive protection

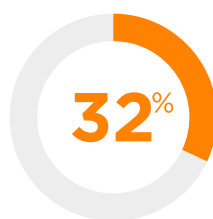

Optional **UV-C stage** and **activated carbon prefilter** for odors, NO₂ and VOCs

The experts for your unique challenge

From HEPA upgrades to your HVAC system, air purification systems or real-time indoor air monitoring devices, MANN+HUMMEL is your development partner of choice for healthy air quality.

of restaurant customers are concerned about their health.²

of adults plan to eat at restaurants less often due to COVID-19 concerns.³

Customer fears over COVID-19 and other pollutants can be a genuine threat to your business. Or, they can be **a real opportunity.**

Provide purified, virus and pollen-free air as part of your service.

Sitting in a bar, restaurant or café should be a relaxing, enjoyable experience - not a time to worry. But many people still have doubts: 'Aren't there viruses in the air when so many people sit together?' Or 'Did the guest that sat here before leave viruses behind?' At the same time, more people are suffering due to airborne allergens. For these people, it can be hard to find spaces to relax without worries of an allergy attack in the back of their mind.

A quick look through customer reviews will show that guests are not just thinking about the food or service when they are sat in

your restaurant – they are looking at what measures you take to protect them from viruses and other airborne pollutants too. They only choose – and return to – places where they feel comfortable.

With OurAir mobile air purifiers you can make clean air part of your service offering. By reducing the aerosol contaminants in the air, you can lower the risk of infection in your premises and give your guests a feeling of safety. You'll help allergy sufferers to breathe deeply and you can lower staff absence due to sick days too.

¹ According to the ISO 29463 and EN 1822 standards

No retrofit, no fuss

Just a healthier, virus-free space

A long-term solution

The good thing about air purifiers is that they still have a role in a post-Corona era. Purifiers will make light work of flu viruses or pollen, so even allergy sufferers can breathe a sigh of relief safely. And to help your bottom line, air purifiers can also reduce the number of sick days your team take too.

Most foodservice facilities are set-up to create a comfortable, pleasant environment for their guests. That means the air conditioning system (if one is present at all) is targeted at cooling or warming the space, not protecting occupants from viruses, pollution and other harmful contaminants.

OurAir air purifiers from MANN+HUMMEL are all-in-one units that enable building owners to turn any indoor space into a virus-free indoor environment.*

No retrofit or building works are required. **Simply plug 'n play and create a healthier space for your guests and team.**

*H14 HEPA filters reliably capture >99.995% of viruses and bacteria.

The OurAir range

Something for every room

Each OurAir model is designed to meet the needs of different room sizes and applications. So, plug one in and deliver cleaner, virus-free purified air in your restaurant, bar or café.

A woman in a cafe apron is smiling and talking to a group of customers seated at a wooden table. The setting is a modern cafe with large windows, indoor plants, and warm lighting. The woman is holding a notepad and pen. The customers are engaged in conversation and looking at the woman. The overall atmosphere is warm and inviting.

Air with a cleanroom pedigree

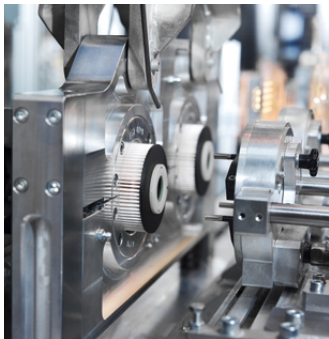

We created the OurAir range on the strength of more than 60 years of experience in cleanrooms and operating theaters. Here, our filters protect people and the wider environment from some of the most dangerous viruses, substances and other contaminants known to man.

Hygiene is part of everyday life in a foodservice business. But now it's crucial to look beyond surfaces and think about the cleanliness of the air in your building too.

People were concerned about the air they were breathing even before a global pandemic hit. Now, it's at the forefront of their minds and will guide their actions for years to come.

OurAir can provide your employees and guests with the peace of mind that the air they breathe in your premises is purified by HEPA filters.

A filtration leader For more than 80 years

For more than eight decades MANN+HUMMEL has been finding new ways to separate the useful from the harmful.

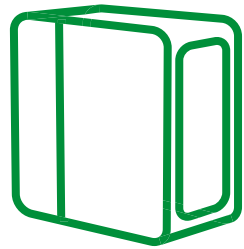

Today, more than 21,000 filter experts – of which around 1,000 in research and development – are working together to make our world cleaner.

26 filters roll off our production lines every second of every day.

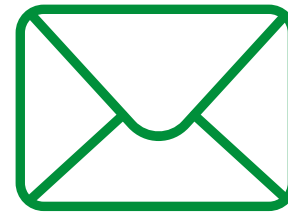

So you can trust us that we will protect your guests, your team and your building in the best possible way.
