A man and a woman are walking through a large warehouse, smiling and looking at each other. The woman is carrying a white shopping bag, and the man is holding a white shopping bag. In the background, there are several mobile air purifiers, including one labeled 'OurAir SQ 2500' by MANN+HUMMEL. The warehouse has high ceilings, bright lights, and various equipment and materials in the background.

of consumers avoided
shopping in-store because
of concerns about
catching COVID-19³

Customer fears over COVID-19 and other pollutants can be a genuine threat to your business. Or, they can be a **real opportunity**.

Meet customer demand and offer purified, virus and pollen-free air in your stores.

Shopping should be a relaxing, enjoyable experience – not a time to worry. But the outbreak of COVID-19 has changed this – possibly forever. What was once seen as an inherently safe activity now raises fears of catching a dangerous viral infection. At the same time, more and more people are suffering due to airborne allergens. But shopping with swollen eyes or a runny nose is no fun. Instead, people will prefer to stay at home and order online.

With OurAir mobile air purifiers you can make clean air part of your in-store experience. By reducing the aerosol contaminants in the air, you can lower the risk of infection in your premises and give your customers a feeling of safety. What's more, you can also lower staff absence due to sick days and help allergy sufferers to breathe deeply too.

¹ According to the ISO 29463 and EN 1822 standards

No retrofit, no fuss

Just a healthier, virus-free space

A long-term solution

The good thing about air purifiers is that they still have a role in a post-Corona era. Purifiers will make light work of flu viruses or pollen, so even allergy sufferers can breathe a sigh of relief safely. And to help your bottom line, air purifiers can also reduce the number of sick days your team take too.

Most retail facilities are set-up to create a comfortable, pleasant environment for their customers. That means the air conditioning system (if one is present at all) is targeted at cooling or warming the space, not protecting occupants from viruses and other harmful contaminants.

OurAir air purifiers from MANN+HUMMEL are all-in-one units that enable building owners to turn any indoor space into a virus-free indoor environment.*

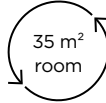

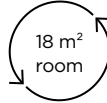

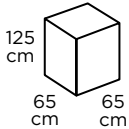

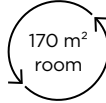

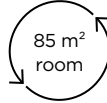

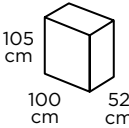

No retrofit or building works are required. **Simply plug 'n play and create a healthier space for your customers and team.**

*H14 HEPA filters reliably capture >99.995% of viruses and bacteria.

The OurAir range

Something for every room

Each OurAir model is designed to meet the needs of different room sizes and applications. So, plug one in and deliver cleaner, virus-free purified air in your store.

	Air exchange rate / room size	Filtration efficiency	Air flow	Size & weight

Air with a cleanroom pedigree

We created the OurAir range on the strength of more than 60 years of experience in cleanrooms and operating theaters. Here, our filters protect people and the wider environment from some of the most dangerous viruses, substances and other contaminants known to man.

People were concerned about the air they were breathing even before a global pandemic hit. Now, it's at the forefront of their minds and will guide their actions for years to come.

Customers will no longer just judge your store on things like parking, prices and product selection. They will factor in how seriously you take their health too.

OurAir can provide your employees and customers with the peace of mind that the air they breathe in your store is purified by HEPA filters.

A filtration leader For more than 80 years

For more than eight decades MANN+HUMMEL has been finding new ways to separate the useful from the harmful.

Today, more than 21,000 filter experts – of which around 1,000 in research and development – are working together to make our world cleaner.

26 filters roll off our production lines every second of every day.

So you can trust us to protect your customers, your team and your business in the best possible way.
