

Apartment complex in Gajaeul South Korea

SAMSUNG C&T Corporation in South Korea is taking concrete measures and installing Filter Cube III columns to protect the residents of a newly built apartment complex from high levels of particulate matter.

The entire apartment complex, which is located in the 5th district of Gajaeul, Seoul, has been completely built by SAMSUNG C&T and comprises 997 households. In addition to the two Filter Cubes, which are designed to protect children from air pollution while playing, SAMSUNG C&T said it is also introducing a variety of other measures to reduce indoor air pollution in the apartment complex to protect residents from fine dust.
