## Installation instructions for bagfilters

Utgåva 1  
2018-02-21  
Sid nr.1(1)

### Instruction

- Use protective clothing, gloves and breathing protection when changing filters.
- Used filters should be placed in a sealed packaging to prevent contamination from spreading.
- MANN + HUMMEL's filters can be handled and disposed of as combustible waste, provided that there is no environmentally hazardous waste in the filter. If there is content that is classified as hazardous waste, follow the rules for handling hazardous waste. If you have any questions, please contact your local Environmental Office / Environmental Management.
- Install sealing strips on the new filter if it is mounted in guide or u-profile.
- Mount the filters with standing pockets for best function. The lying pockets will impair the function and causes deteriorated dust holding capacity and worsened effectivity.
- While mounting the filter be careful not to damage the pockets on sharp edges.
